# P.W. Board

## Main Amp P.W. Board Parts

Measure voltages while in the REC mode.  
Employ a tester having an impedance of  $20\text{ k}\Omega/\text{V}$ .  
Employ the lowest of the tester settings – 50 V, 10 V, 2.5 V or 1 V – in which the needle does not deflect out of the range.

C. Tester = Circuit Tester  
E. Voltmeter = Electronic Voltmeter

△ parts are safety assurance parts.

## Repair Guide

### 1. To reduce the motor noise

When soldering E. Capacitor (C51, 1  $\mu$ F 25 V) to motor wire terminals, solder earth  $\ominus$  tip of E. Capacitor to motor case, as following in illustration. But when using MMI-6B2HD (parts No. of motor), no need to solder it to motor case.

### 2. To reduce the reed switch noise

Connect the wire and lug from earth pattern of reed switch P.B. board to the mechanical chassis. (When fastening the lug, use the same screw fastening the reed switch P.W. board bracket.)
